📁 Professional Experience

Software Development Engineer, *Aspire Finance* Nov 2025 – Present | Bengaluru, India

- **Stood up the team's first observability stack** (Prometheus + Grafana + Loki) instrumenting API latency, auth events, consolidated application logs, and server health alerting from scratch.
- **Designed a dual-auth module - JWT for CRM logins, API keys for service access, with DB-driven RBAC**, admin-issued password resets, and expiry-based lockout, enforced via a single validation decorator.
- **Automated 90% of the Collection Allocation** and Tracking by creating logics around allocating cases between agents, tracking their collection performance on a daily, weekly, monthly basis, reducing the manual updates and tech bandwidth by approx 1 hour daily.
- **Took sole ownership of the lending/repayment stack** after the previous engineer's exit. Ran RCA on payment-reconciliation gaps across payment gateway, backend DB, and LMS, resolved 26 stuck cases and shipped systemic fixes preventing recurrence.

Software Development Engineer, *Babynama* Jun 2023 – Oct 2025 | Gurgaon, India

Backend Engineering Intern (Jun–Dec 2023), converted to full-time in Jan 2024

- One of 2 backend engineers across **5 product surfaces** (mobile app, website, doctor app, support portal, customer support chatbot), owned **schema design, API development, and production deploys**.
- Designed a **server-driven UI system** where the backend controlled the mobile home screen per user (carousels, theming, navbar, feature flags, and nudge orchestration with per-user frequency capping), letting the team reconfigure layout, content, and CTAs **without an app release**.
- Built an **AI-powered medical chatbot** handling ~500 patient queries/day and **resolving roughly a third of them without doctor escalation**, cutting repetitive load on the medical team.
- Migrated from APScheduler to **Celery** (using Redis), enabling reliable, asynchronous job scheduling with **fault-tolerance and retry handling**.

🧠 Skills

- **Languages/Framework** – Python | Django, DRF | FastAPI
- **Tools and Cloud** – Docker | Git, Github | AWS SQS, EC2 | GCP | Nginx | Prometheus, Grafana | Kafka
- **Databases** – Postgres | MySQL | Redis | Firestore | MongoDB | BigQuery

📁 Projects

E-commerce Backend System Apr 2025 – Jun 2025

Tech Stack - Python, Django, DRF, PostgreSQL, Docker, Nginx, AWS, S3

- **Architected** and built a production Django/DRF backend serving web and mobile clients via **role-based APIs** (user, cart, order, admin), backed by PostgreSQL and JWT auth.
- **Automated the order-to-delivery pipeline** by integrating Razorpay (payments), Shiprocket (logistics), and Twilio (OTP auth), with auto-generated PDF invoices stored on S3.
- **Deployed** via Docker to a VPS on a custom domain with Nginx+Let's Encrypt SSL with OpenAPI docs [🔗](#).

🎓 Education

Masters Of Computer Applications, *Chandigarh University*

Jan 2024 – Jan 2026

Bachelor of Science (Statistics), *CCS University*

2020 – 2023
